- Ms-excel to track the bugs.

Project#6: **CIAT** (ConMed Inventory Analysis Tool)
Organization: WNS Global Services Ltd.
Duration: March-12 to Sept-12.
Description: By CIAT tool Provides the professional facing a complex product mix and significant uncertainty with an effective, fast, and affordable solution for inventory and service level optimization via a web-based platform combining, the structured process guides the user to establish and maintain the optimal inventory and service levels over the long term. In this tool first data uploaded from backend, after that from application users can configure the condition and make strategy for the product and apply for the same. On the basis of classification condition and strategy, application show all the alerts and report for products.

Responsibilities:
- Involving in manual testing in application.
- Designing and executing test cases based on Business requirements in this application.
- Database testing using SQL Server.
- Responsible for data integration testing using ETL tool.
- Data Validation testing.
- Used Trackpoint and Ms-excel to track the bugs.
- Involved in UAT testing with client.
- Report testing with SSRS.

Project#8: **Australia Equity Monitor**
Organization: WNS Global Services Ltd.
Client: Coca-Cola
Duration: Feb-11 to Jan-2012.
Description: Australia Equity Monitor is an interactive and brand specific scorecard that will enable insights and marketing to monitor their brands performance with ease on a monthly basis for Australia and New Zealand. It will help in analyzing trends across time and compare it across target groups. All measures are compared to previous year and the differences are checked for statistical significance at 95% confidence level. The Informatica is used for extracting data from source to target system. There are numerous sources of data coming into the warehouse including flat files and excel spreadsheets. The warehouse is used to capture the change data after applying the business rules and load them to the target system.

Responsibilities:
- Involving in manual testing in application.
- Designing and executing test cases based on Business requirements in this application.
- Used Trackpoint tool for bug report.
- Responsible for data integration testing using tool INFORMATICA.

- Verifying the mapping in INFORMATICA power center designer, either data is uploaded correctly or not.
- Data Validation testing.

Project#9:   **Profit Seeker**
Organization: WNS Global Services Ltd.
Client: Coca-Cola
Duration: June-10 to Dec-10
Description: In any Retail Business Operation one key area is to understand the impact of pricing changes on SKU volumes. Based on this clear analysis can be done to optimize the price at which the SKU is sold, with an objective of optimizing the Revenue and Profit of the organization. Profit seeker is a model/system that helps us understand this. INFORMATICA is used to upload Nielsen data and coca cola own financial data to oracle database.

Responsibilities:
- Involving in manual testing in application.
- Designing and executing test cases based on Business requirements in this application.
- Used Trackpoint tool for bug report.
- Responsible for data integration testing using tool INFORMATICA.
- Verifying the mapping in INFORMATICA power center designer, either data is uploaded correctly or not.
- Data Validation testing

Project#10:   **Comergence compliance monitoring**
Organization: WNS Global Services Ltd.
Client: Comergence
Duration: Dec-09 to May-10
Description: The Comergence Realm allows registered users (Brokers/Lenders) the ability to interact and conduct business with one another. Realm allows Brokers to apply to Lenders in order to conduct business on behalf of the lenders. Brokers that apply to Lenders are in the application process and can be accessed by the lenders from the broker management screen within the application. Comergence REALM also maintains a database that will serve as a repository of industry wide data and provide its users the ability to perform key functionalities relating to compliance requirements like monitoring broker licenses, performing due diligence, updating state license data store, maintaining valuable documents with history, finding and applying to suitable lenders and alerts notifications on every important business entity change.

Responsibilities:
- Involving in manual testing in application.
- Designing and executing test cases based on Business requirements in this application.
- Used Trackpoint tool for bug report.
- Responsible for data integration testing using tool INFORMATICA.
- Verifying the mapping in INFORMATICA power designer, either data is uploaded correctly or not.
- Data Validation testing.
